# 1 Introduction

## 1.1 Overview

This document describes Bats Binary Order Entry (BOE), the Bats proprietary order entry protocol. Where applicable, the terminology (e.g., time in force) used in this document is similar to that used by the FIX protocol to allow those familiar with FIX to more easily understand BOE. This document assumes the reader has basic knowledge of the FIX protocol.

BOE fulfills the following requirements:

- *CPU and memory efficiency.* Message encoding, decoding, and parsing are simpler to code and can be optimized to use less CPU and memory at runtime.
- *Application level simplicity.* State transitions are simple and unambiguous. They are easy to apply to a Member's representation of an order.
- *Session level simplicity.* The session level protocol (login, sequencing, replay of missed messages, logout) is simple to understand.

While Bats has strived to preserve feature parity between FIX and BOE where possible, certain BOE functionality will not be made available in FIX.

All binary values are in little Endian (used by Intel x86 processors), and not network byte order.

Each message is identified by a unique message type. Not all message types are used in all of Bats' trading environments globally. A complete listing of all message types is provided in the **List of Message Types** section

All communication is via standard TCP/IP.

## 1.2 Data Types

The following data types are used by BOE. The size of some data types varies by message. All data types have default values of binary zero, in both Member to Bats and Bats to Member contexts.

- *Binary:* Little Endian byte order, unsigned binary value. The number of bytes used depends on the context.
  - One byte: FE = 254
  - Four bytes: 64 00 00 00 = 100
- *Signed Binary:* Little Endian byte order, signed two's complement, binary value. The number of bytes used depends on the context.
  - One byte: DF = -33
  - Four bytes: 64 00 00 00 = +100
- *Binary Price:* Little Endian byte order value, eight bytes in size, with four implied decimal places. So, if the value is 123,400, the actual value taking into account implied decimal places is 12.34.
  - 08 E2 01 00 00 00 00 00 = 123,400/10000 = 12.34

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

- *Signed Binary Price*: Little Endian byte order value, signed two's complement, eight bytes in size, with four implied decimal places. So, if the value is -123,400, the actual value taking into account implied decimal places is -12.34.
  - 08 E2 01 00 00 00 00 00 = 123,400/10000 = 12.34
  - F8 1D FE FF FF FF FF FF = 123,400/10000 = -12.34
- *Short Binary Price*: Little Endian byte order value, four bytes in size, with four implied decimal places. So, if the value is 12,300, the actual value taking into account implied decimal places is 1.23.
  - 0C 30 00 00 = 12,300/10000 = 1.23
- *Signed Binary Fee*: Little Endian byte order value, eight bytes in size, signed, with five implied decimal places. So, the value -123,000 is -1.23 after taking account for the five implied decimal places.
  - 88 1F FE FF FF FF FF FF = -123,000/100000 = -1.23
- *Alpha*: Uppercase letters (A-Z) and lowercase letters (a-z) only. ASCII NUL (0x00) filled on the right, if necessary. The number of bytes used depends on the context.
- *Alphanumeric*: Uppercase letters (A-Z), lowercase letters (a-z) and numbers (0-9) only. ASCII NUL (0x00) filled on the right, if necessary.
- *Text*: Printable ASCII characters only. ASCII NUL (0x00) filled on the right, if necessary.
- *DateTime*: 8 bytes. The date and time, in UTC, represented as nanoseconds past the UNIX epoch (00:00:00 UTC on 1 January 1970). The nanoseconds portion is currently ignored and treated as 0 (i.e. the times are only accurate to microseconds) on input, and will always be set to 0 by Bats in outgoing messages. However, **Bats may begin populating the nanoseconds portion at any time without warning.**

For example: 1,294,909,373,757,324,000 = 2011-01-13 09:02:53.757324 UTC.

### 1.3 Optional Fields and Bitfields

Some messages such as `New Order` and `Modify Order` have a number of optional fields. A required field in the message specifies the optional fields that are present at the end of the message. If a bit is set, the field will be present. Fields are appended to the end of the message. There is no implicit framing between the optional fields. In order to decode the optional fields, they *must* be appended in a particular order to the end of the message. The fields of the first bitfield are appended first, lowest order bit first. Next, the fields of the next bitfield are appended, lowest order bit first. This continues for all bitfields. While certain *RESERVED* bits within a defined bitfield are used within another Bats market and will be ignored, bits that are reserved for future expansion must be set to '0' when noted in the bitfield description.

The size and data type for each optional field is described in the **List of Optional Fields** section.

Incoming messages (`New Order`, `Modify Order`, `Cancel Order`) will be rejected if they have any bits set that are not documented in the *NewOrderBitfields*, *ModifyOrderBitfields*, or *CancelOrderBitfields* defined further below.

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

Note that the set of optional fields returned for each Bats to Member message type is determined at session login (using the `Login Request` message); hence, the exact size and layout of each message received by the client application can be known in advance. Any requested optional field which is irrelevant in a particular context will still be present in the returned message, but with all bytes set to binary zero (0x00).

Each return message from Bats to a Member indicates the optional fields which are present, even though the Member firm indicated during login which optional fields are to be sent. These fields are included (and duplicated) by design so that each message can be interpreted on its own, without having to find the corresponding login request or response to know which optional fields are present. So, for example, in a log file, decoding a message requires only that single message.

Example messages are shown with each message type which should help to make this concept clear.

## 2 Session

### 2.1 Message Headers

Each message has a ten byte header. The two initial *StartOfMessage* bytes are present to aid in message reassembly for network capture purposes. The *MatchingUnit* field is only populated on non-session level messages sent from Bats to the Member. Messages from Member to Bats and all session level messages must always set this value to 0.

| Field          | Offset | Length | Data Type | Description                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------|--------|--------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                                                                                                                                                                                                                                                                                                                     |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field.                                                                                                                                                                                                                                                                                             |
| MessageType    | 4      | 1      | Binary    | Message type.                                                                                                                                                                                                                                                                                                                                                                                                          |
| MatchingUnit   | 5      | 1      | Binary    | The matching unit which created this message. Matching units in BOE correspond to matching units on Multicast PITCH.<br><br><b>For session level traffic, the unit is set to 0.</b><br><br><b>For messages from Member to Bats, the unit must be 0.</b>                                                                                                                                                                |
| SequenceNumber | 6      | 4      | Binary    | The sequence number for this message.<br><br>Messages from Bats to Member are sequenced distinctly per matching unit.<br><br>Messages from Member to Bats are sequenced across all matching units with a single sequence stream.<br><br>Members can optionally send a 0 sequence number on all messages from Member to Bats; however, Bats highly recommends members to send sequence numbers on all inbound messages. |

### 2.2 Login, Replay and Sequencing

Session level messages, both inbound (Member to Bats) and outbound (Bats to Member) are unsequenced.

Inbound (Member to Bats) application messages are sequenced. Upon reconnection, Bats informs the Member of the last processed sequence number; the Member *may* choose to resend any messages with sequence numbers greater than this value. A gap forward in the Member's incoming sequence number is permitted at any time and is ignored by Bats. Gaps backward in sequence number (including the same sequence number used twice) are never

permitted and will always result in a `Logout` message being sent and the connection being dropped.

Outbound (Bats to Member) application messages (but *not* `Order Rejected`, `Cancel Rejected` or `User Modify Rejected`) are monotonically sequenced per matching unit. While matching units on BOE correspond directly to matching units on Multicast PITCH, sequence numbers do not.

Upon reconnection, a Member sends the last received sequence number per matching unit in a `Login Request` message. Bats will respond with any missed messages. However, when the `Login Request SpecifiedOnlyUnitReplay` flag is enabled, Bats will exclude messages from unspecified matching units during replay. Bats will send a `Replay Complete` message when replay is finished. If there are no messages to replay, a `Replay Complete` message will be sent immediately after a `Login Response` message. **Bats will reject all orders during replay.**

Assuming Member has requested replay messages using a properly formatted `Login Request` after a disconnect, any unacknowledged orders remaining with the Member after the `Replay Complete` message is received should be assumed to be unknown to Bats.

**Unsequenced messages will not be included during replay.**

A session is identified by the username and session sub-identifier (both supplied by Bats). Only one concurrent connection per username and session sub-identifier is permitted.

If a login is rejected, an appropriate `Login Response` message will be sent and the connection will be terminated.

## 2.3 Sequence Reset

A reset sequence operation is not available for Binary Order Entry. However, a Member can send a `Login Request` message with `SpecifiedOnlyUnitReplay` field enabled, and `NumberOfUnits` field set to zero. Then, upon receiving a `Login Response` message from Bats, the Member can use the field `LastReceivedSequenceNumber` as the sequence starting point for sending future messages.

## 2.4 Heartbeats

`Client Heartbeat` messages are sent from Member to Bats and `Server Heartbeat` messages are sent from Bats to Member if no other data has been sent in that direction for one second. Like other session level messages, heartbeats from Bats to the Member do *not* increment the sequence number. The sequence number for heartbeat messages will be 0. If Bats receives no inbound data or heartbeats for five seconds, a `Logout` message will be sent and the connection will be terminated. **Members are encouraged to have a one second heartbeat interval and to perform similar connection staleness logic.**

## 2.5 Logging Out

To gracefully log out of a session, a `Logout Request` message should be sent by the Member. Bats will finish sending any queued data for that port and will then respond with its own `Logout` message and close the connection. After receipt of a `Logout Request` message, Bats will ignore all other inbound (Member to Bats) messages except for `Client Heartbeat`.

## 3 Session Messages

### 3.1 Member to Bats

#### 3.1.1 Login Request

A Login Request message must be sent as the first message upon connection. In addition to ensuring the client may connect, the client must include the last consumed sequence number per matching unit. Bats uses these sequence numbers to determine what outbound traffic, if any, was missed by the Member.

The client does *not* need to include a sequence number for a unit if they have never received messages from it. For example, if the client has received responses from units 1, 3, and 4, the `Login Request` message need not include unit 2. If the client wishes to send a value for unit 2 anyway, 0 would be the only allowed value.

The *Return Bit* fields control which attributes of a message will be returned by Bats for the remainder of the session. This allows Members to tailor the echoed results to the needs of their system without paying for bandwidth or processing they do not need. Refer to the **List of Return Bitfields** section for additional information. Bats will verify received *Return Bitfields* at login time; see the **Login Response** section for more information.

| Field                       | Offset | Length | Data Type    | Description                                                                                                                                                                                          |
|-----------------------------|--------|--------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage              | 0      | 2      | Binary       | Must be 0xBA 0xBA.                                                                                                                                                                                   |
| MessageLength               | 2      | 2      | Binary       | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field.                                                                           |
| MessageType                 | 4      | 1      | Binary       | 0x01                                                                                                                                                                                                 |

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

|                           |             |                                      |
|---------------------------|-------------|--------------------------------------|
| NumberOfUnits             | 03          | Three unit/sequence pairs to follow. |
| UnitNumber <sub>1</sub>   | 01          | Unit 1                               |
| UnitSequence <sub>1</sub> | 4A BB 01 00 | Last received sequence of 113,482    |
| UnitNumber <sub>2</sub>   | 02          | Unit 2                               |
| UnitSequence <sub>2</sub> | 00 00 00 00 | Last received sequence of 0          |
| UnitNumber <sub>3</sub>   | 03          | Unit 3                               |
| UnitSequence <sub>3</sub> | 79 A1 00 00 | Last received sequence of 41,337     |

### 3.1.2 Logout Request

To end the session, the Member should send a `Logout Request` message. Bats will finish sending any queued data and finally respond with a `Logout` message and close the connection.

A Member may simply close the connection without logging out, but may lose any queued messages by doing so.

| Field          | Offset | Length | Data Type | Description                                                                                                                |
|----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType    | 4      | 1      | Binary    | 0x02                                                                                                                       |
| MatchingUnit   | 5      | 1      | Binary    | Always 0 for inbound (Member to Bats) messages.                                                                            |
| SequenceNumber | 6      | 4      | Binary    | Always 0 for session level messages.                                                                                       |

#### Example Login Request Message:

| Field Name     | Hexadecimal | Notes                               |
|----------------|-------------|-------------------------------------|
| StartOfMessage | BA BA       | Start of message bytes.             |
| MessageLength  | 08 00       | 8 bytes                             |
| MessageType    | 02          | Logout Request                      |
| MatchingUnit   | 00          | Always 0 for inbound messages       |
| SequenceNumber | 00 00 00 00 | Always 0 for session level messages |

### 3.1.3 Client Heartbeat

See the **Heartbeats** section for more information on heartbeats and the session level protocol.

| Field          | Offset | Length | Data Type | Description                                                                                                                |
|----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType    | 4      | 1      | Binary    | 0x03                                                                                                                       |
| MatchingUnit   | 5      | 1      | Binary    | Always 0 for inbound (Member to Bats) messages.                                                                            |
| SequenceNumber | 6      | 4      | Binary    | Always 0 for session level messages.                                                                                       |

#### Example Client Heartbeat Message:

| Field Name     | Hexadecimal | Notes                               |
|----------------|-------------|-------------------------------------|
| StartOfMessage | BA BA       | Start of message bytes.             |
| MessageLength  | 08 00       | 8 bytes                             |
| MessageType    | 03          | Client Heartbeat                    |
| MatchingUnit   | 00          | Always 0 for inbound messages       |
| SequenceNumber | 00 00 00 00 | Always 0 for session level messages |

## 3.2 Bats to Member

### 3.2.1 Login Response

A `Login Response` message is sent in response to a `Login Request` message. On a successful login, the `LoginResponseStatus` will be set to 'A'. On a failed login, `LoginResponseStatus` will be set to a value other than 'A', and `LoginResponseText` will be set to an appropriate failure description.

**Bats will verify *Return Bitfields* at login time.** If *Return Bitfields* are invalid, `LoginResponseStatus` will be set to 'F', and `LoginResponseText` will include a description of which byte and bit are invalid. This is done to ensure that reserved fields are not used, and only options that apply to the local market are set. See the **List of Return Bitfields** section for additional information.

| Field                       | Offset | Length | Data Type    | Description                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|--------|--------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage              | 0      | 2      | Binary       | Must be 0xBA 0xBA.                                                                                                                                                                                                                                                                                                                                                              |
| MessageLength               | 2      | 2      | Binary       | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field.                                                                                                                                                                                                                                                      |

Last received sequence of 0

UnitNumber<sub>4</sub> 04

Unit 4

UnitSequence<sub>4</sub> 79 A1 00 00

Last received sequence of 41,337

### 3.2.2 Logout

A Logout is usually sent in response to a Logout Request. Any queued data is transmitted, a Logout is sent, and Bats will close the connection. However, a Logout may also be sent if the Member violates the protocol specification (e.g., by moving backwards in sequence number).

The Logout contains the last transmitted sequence number for each unit, allowing the Member to check that their last received sequence number matches.

| Field             | Offset | Length | Data Type    | Description                                                                                                                                |
|-------------------|--------|--------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage    | 0      | 2      | Binary       | Must be 0xBA 0xBA.                                                                                                                         |
| MessageLength     | 2      | 2      | Binary       | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field.                 |
| MessageType       | 4      | 1      | Binary       | 0x08                                                                                                                                       |
| MatchingUnit      | 5      | 1      | Binary       | Always 0 for session level messages.                                                                                                       |
| SequenceNumber    | 6      | 4      | Binary       | Always 0 for session level messages.                                                                                                       |
| LogoutReason      | 10     | 1      | Alphanumeric | The reason why the Logout message was sent.<br><br>U = User Requested<br>E = End of Day<br>A = Administrative<br>! = Protocol Violation    |
| LogoutReason Text | 11     | 60     | Text         | Human-readable text with additional information about the reason for logout. Particularly useful if LogoutReason = ! (Protocol Violation). |

### 3.2.3 Server Heartbeat

See the **Heartbeats** section for more information on heartbeats and the session level protocol.

| Field          | Offset | Length | Data Type | Description                                                                                                                |
|----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType    | 4      | 1      | Binary    | 0x09                                                                                                                       |
| MatchingUnit   | 5      | 1      | Binary    | Always 0 for session level messages.                                                                                       |
| SequenceNumber | 6      | 4      | Binary    | Always 0 for session level messages.                                                                                       |

#### Example Server Heartbeat Message:

| Field Name     | Hexadecimal | Notes                               |
|----------------|-------------|-------------------------------------|
| StartOfMessage | BA BA       | Start of message bytes.             |
| MessageLength  | 08 00       | 8 bytes                             |
| MessageType    | 09          | Server Heartbeat                    |
| MatchingUnit   | 00          | Always 0 for session level messages |
| SequenceNumber | 00 00 00 00 | Always 0 for session level messages |

### 3.2.4 Replay Complete

See the **Login, Replay and Sequencing** section for more information on Login, sequencing and replay.

| Field          | Offset | Length | Data Type | Description                                                                                                                |
|----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType    | 4      | 1      | Binary    | 0x13                                                                                                                       |
| MatchingUnit   | 5      | 1      | Binary    | Always 0 for session level messages.                                                                                       |
| SequenceNumber | 6      | 4      | Binary    | Always 0 for session level messages.                                                                                       |

#### Example Replay Complete Message:

| Field Name     | Hexadecimal | Notes                               |
|----------------|-------------|-------------------------------------|
| StartOfMessage | BA BA       | Start of message bytes.             |
| MessageLength  | 08 00       | 8 bytes                             |
| MessageType    | 13          | Replay Complete                     |
| MatchingUnit   | 00          | Always 0 for session level messages |
| SequenceNumber | 00 00 00 00 | Always 0 for session level messages |

## 4 Application Messages

### 4.1 Member to Bats

#### 4.1.1 New Order

A `New Order` message consists of a number of required fields followed by a number of optional fields. The optional fields used are specified by setting bits in the *NewOrderBitfields*. Fields must be appended at the end of the message.

| Field          | Offset | Length | Data Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**Required Order Attributes:**

The following are required to be sent on new orders for instruments traded on Bats:

- some form of symbology (see **Symbology** below).
- a *Price* only (limit orders) or a *Price* and/or *OrdType* (limit, market, or peg orders).
- *Capacity*.

All other values have defaults. See the table in the **List of Optional Fields** section for additional information about each optional field, including its default value.

**Symbology:**

For Bats US Equities symbology, please refer to the [Bats Symbology Reference](#) document.

**Example New Order Message:**

#### 4.1.3 Modify Order

Request to modify an order. The order attributes to be modified are specified using *ModifyOrderBitfieldOne* and *ModifyOrderBitfieldTwo*.

Only *Price*, *Side*, *OrderQty*, and *OrdType* may be adjusted. Any change in *Price* or any increase in *OrderQty* will result in the order losing its time priority. *OrdType* may be adjusted from Limit to Market (but not from Limit to Peg or Peg to Limit). *Side* may only be used to change an order from a short sell to a long sell or vice versa. Modification of *Side* will only result in loss of priority if *Side* is changing to/from a short sell **AND** the *Symbol* is in a Regulation SHO Short Sale Circuit Breaker.

Other fields (including *ExecInst*) **will be ignored**, and the value from the original order will be re-used. In particular note that when a Day-ISO is modified the ISO designation is applied to the new order.

Changes in *OrderQty* result in an adjustment of the current order's *OrderQty*. The new *OrderQty* does not directly replace the current order's *LeavesQty*. Rather a delta is computed from the current *OrderQty* and the replacement *OrderQty*. This delta is then applied to the current *LeavesQty*. If the resulting *LeavesQty* is less than or equal to zero, the order is cancelled. This results in safer behavior when the replace request overlaps partial fills for the current order, leaving the Member in total control of the share exposure of the order.

*MaxFloor* and *DiscretionAmount* are preserved from the original order and applied to the new size and price.

A *Modify Order* should not be issued until the *Order Modified* message for the previous *Modify Order* has been received for that order. The BOE handler will reject a new *Modify Order* if it has not seen the prior *Modify Order* from the Matching Engine.

*Modify Order* requests that merely reduce *OrderQty* may be overlapped if the existing *ClOrdID* is re-used. This is the only case where re-use of the existing *ClOrdID* is allowed.

| Field          | Offset | Length | Data Type | Description                                                                                                                |
|----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength  | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType    | 4      | 1      | Binary    | 0x06                                                                                                                       |
| MatchingUnit   | 5      | 1      | Binary    | Always 0 for inbound (Member to Bats) messages.                                                                            |
| SequenceNumber | 6      | 4      | Binary    | The sequence number for this message..                                                                                     |
| ClOrdID        | 10     | 20     | Text      | New <i>ClOrdID</i> for this order.                                                                                         |

## 4.2 Bats to Member

### 4.2.1 Order Acknowledgement

Order Acknowledgement messages are sent in response to a New Order message. The message corresponds to a FIX Execution Report with *ExecType* (150) = 0 (New).

Per the instructions given in the Login Request, optional fields may be appended to echo back information provided in the original New Order message. Fields which have been requested to be echoed back, but which were not filled in will still be sent and will be filled with binary zero (0x00).

| Field           | Offset | Length | Data Type | Description                                                                                                                                                          |
|-----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage  | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                                                                   |
| MessageLength   | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field.                                           |
| MessageType     | 4      | 1      | Binary    | 0x0A                                                                                                                                                                 |
| MatchingUnit    | 5      | 1      | Binary    | The matching unit which created this message. Matching units in BOE correspond to matching units on Multicast PITCH.                                                 |
| SequenceNumber  | 6      | 4      | Binary    | The sequence number for this message. Distinct per matching unit.                                                                                                    |
| TransactionTime | 10     | 8      | DateTime  | The time the event occurred in the Bats matching engine (not the time the message was sent).                                                                         |
| ClOrdID         | 18     | 20     | Text      | Echoed back from the original New Order message.                                                                                                                     |
| OrderID         | 38     | 8      | Binary    | Corresponds to <i>OrderID</i> (37) in Bats FIX. Order identifier supplied by Bats. This identifier corresponds to the identifiers used in Bats market data products. |

#### 4.2.3 Order Modified

Order Modified messages are sent in response to a Modify Order request to indicate that the order has been successfully modified.

**Note:** It is highly advised that all Members opt-in to receiving *LeavesQty* on Order Modified messages. In certain cases, the last message to be received on an order's lifecycle will be an Order Modified message. In such cases, to know the order is no longer live you must inspect *LeavesQty*. An example of this behavior would be modification of an order whilst an execution is being generated, resulting in the order being reduced to zero outstanding shares.

#### 4.2.4 Order Restated

`Order Restated` messages are sent to inform the Member that an order has been asynchronously modified for some reason without an explicit `Modify Order` request having been sent.

Some example (non-exhaustive) reasons for `Order Restated` messages being sent:

- A reserve (iceberg) order has been reloaded.
- An order's remaining quantity was decremented because of a prevented wash trade.
- A re-routable order has returned to rest on the book after matching liquidity on another market.
- Resting order transitions from a liquidity adder to a liquidity remover or a routed order returns to the book. This can occur as a result of discretion, when a peg order moves into another order, or an order returns from its initial route attempt.

Members should be prepared to accept and apply `Order Restated` messages for any reason.

The `OrderRestatedBitfield1` and `OrderRestatedBitfield2` fields indicate the characteristics of the order which have changed. Optional fields will be present at the end of the message with the new values.

**Note:** It is highly advised that all Members opt-in to receiving `LeavesQty` on `Order Restated` messages. In some cases, the last message to be received on an order's lifecycle will be an `Order Restated` message. In such cases, to know the order is no longer live you must inspect `LeavesQty`. An example of this behavior would be restatement of an order in certain cases due to `PreventMemberMatch` being set to 'd'.

To maintain compatibility with Members who have already implemented BOE, this field will remain in the optional block.

| Field           | Offset | Length | Data Type | Description                                                                                                                      |
|-----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage  | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                               |
| MessageLength   | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <code>StartOfMessage</code> field. |
| MessageType     | 4      | 1      | Binary    | 0x0D                                                                                                                             |
| MatchingUnit    | 5      | 1      | Binary    | The matching unit which created this message. Matching units in BOE correspond to matching units on Multicast PITCH.             |
| SequenceNumber  | 6      | 4      | Binary    | The sequence number for this message. Distinct per matching unit.                                                                |
| TransactionTime | 10     | 8      | DateTime  | The time the event occurred in the Bats matching engine (not the time the message was sent).                                     |
| ClOrdID         | 18     | 20     | Text      | Client order ID. For user modifies, this is the <code>ClOrdID</code> from the <code>Modify Order</code>                          |

#### 4.2.6 Order Cancelled

An order has been cancelled.

| Field           | Offset | Length | Data Type | Description                                                                                                                |
|-----------------|--------|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|
| StartOfMessage  | 0      | 2      | Binary    | Must be 0xBA 0xBA.                                                                                                         |
| MessageLength   | 2      | 2      | Binary    | Number of bytes for the message, including this field but not including the two bytes for the <i>StartOfMessage</i> field. |
| MessageType     | 4      | 1      | Binary    | 0x0F                                                                                                                       |
| MatchingUnit    | 5      | 1      | Binary    | The matching unit which created this message. Matching units in BOE correspond to matching units on Multicast PITCH.       |
| SequenceNumber  | 6      | 4      | Binary    | The sequence number for this message. Distinct per matching unit.                                                          |
| TransactionTime | 10     | 8      | DateTime  | The time the event occurred in the Bats matching engine (not the time the message was sent).                               |
| ClOrdID         | 18     | 20     | Text      | The order which was cancelled.                                                                                             |

## 5 Implementation Notes

### 5.1 Automatic Cancel on Disconnect Malfunction

All open orders for a Member will be cancelled automatically if no messages have been received from the Member for 5 seconds. This is done to prevent orders from being stuck in an unknown state in the event of telecommunications failure. Order Cancelled messages for the automatically cancelled orders are available upon reconnection. Members are responsible for rerouting orders to other market centers based on their business needs. This should be rare, but all open orders may also be cancelled in the event of a complete or partial system malfunction.

### 5.2 Access Fees Returned on Order Executions

The access fee associated with each fill is calculated to 5 decimals and returned on each order execution. Negative numbers indicate liquidity rebates. Members should program their systems to read, validate, and pass along this field in order to avoid making software changes to their systems when the Bats fee schedule changes. The sum of the access fees received during a month should equal the access fee charged or rebated on a Member's monthly bill, rounded to the nearest penny.

### 5.3 Service Bureau Configuration

*ClearingFirm* must be set on New Order, Cancel Order and Modify Order messages sent to Bats. Orders with an unknown *ClearingFirm* will be rejected. *ClOrdID* values are required to be unique only within a given *ClearingFirm*. Messages sent by Bats will echo back the *ClearingFirm* value. **Orders must be cancelled or modified using the same *ClearingFirm* as was sent on the Order.**

### 5.4 OATS Connection ID

The OATS technical spec as of 5/3/2011 for implementation on 10/3/2011 allows for an optional 'connectionId' field to be included in your OATS feeds for the purposes of improving your order ID uniqueness. When creating OATS rows related to your transmissions to Bats, Bats recommends populating the OATS 'connectionId' field with the *SessionSubId* field as it appears on the login request. Please note that this field is optional on your OATS rows, and Bats is not recommending a perspective that you do or do not populate the field. Also note that the while not enforced internally, the Bats spec does require that your client order ID be day-unique; Bats continues to recommend this as the best way to meet OATS' day-unique order ID requirements.

### 5.5 OATS Exchange Participant ID (EPID)

While most Members should use *ClearingFirm* (FIX Tag 439) for their OATS EPID, Service Bureaus should use *OnBehalfOfCompld* (FIX Tag 115).

## 6 Drop Copies

Drop copies of BOE traffic are available. Execution only drop copies are available via legacy (fixed-width) drop and FIX drop based interfaces. Order-by-order drop copies are available via Order by Order FIX drop based interfaces.

### 6.1 Max Number of Hits

Bats has repurposed FIX Tag 1 on FIX Drop ports to allow Registered Market Makers utilizing the Bats Market Maker Quoter to actively monitor the number of hits the Market Maker has remaining before Bats will pull both sides of their automated quote. FIX Tag 1 on FIX Drop ports will be used to maintain a count of hits remaining for a given security for all Market Maker Quoter events.

In event of an execution, FIX Tag 1 should be monitored for a value of 0 as at that point the Market Makers quote will be pulled and the Market Maker will need to take appropriate action in order to continue to fulfill their quote obligations. This may involve contacting the Bats Trade Desk to re-establish their automated quote or the Market Maker may choose to start fulfilling their quote obligation on their own.

In the case where the **Max Quote** (refer to the [Bats US Equities Market Maker Quoter Specification](#)) parameter has not been defined for a registered security, a value of UNLIMITED will be displayed in FIX Tag 1.

## 7 Future Expansion

New message types may be added without notice.

New fields may be added without notice. For messages which specify optional fields with bitfields (e.g., `Order Acknowledgement`), expansion will use a bit which has been reserved for future expansion. For messages which do not use optional fields with bitfields (e.g., `Order Cancelled`), fields will be appended to the end of the message.

In Bats' certification environment, undocumented messages will intentionally be sent occasionally. Undocumented extra fields will also occasionally be sent. This will aid Members in ensuring that their decoders will cope with future protocol changes.

## 8 List of Return Bitfields

This section lists all return bitfields. Specified unused bits *must* be set to 0, as they are reserved for future expansion. Reserved bits not noted as being required to be set to 0 are used by another Bats trading platform and will be ignored. Bats reserves the right to add more bit fields as per new requirements.

| Field            | Length               | Data Type | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |      |   |         |   |               |   |                 |   |                  |    |          |    |                   |    |          |     |                      |

| WorkingPrice | 8 | Binary Price | <p>Only present when order is fully or partially booked. If price had to be adjusted to a less aggressive value to avoid crossing the NBBO, the adjusted price will be reported here, otherwise equals price.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 10 List of Message Types

### 10.1 Member to Bats

| Message Name     | Session/Application | Message Type | Sequenced |
|------------------|---------------------|--------------|-----------|
| Login Request    | Session             | 0x01         | No        |
| Logout Request   | Session             | 0x02         | No        |
| Client Heartbeat | Session             | 0x03         | No        |
| New Order        | Application         | 0x04         | Yes       |
| Cancel Order     | Application         | 0x05         | Yes       |
| Modify Order     | Application         | 0x06         | Yes       |

### 10.2 Bats to Member

| Message Name            | Session/Application | Message Type | Sequenced |
|-------------------------|---------------------|--------------|-----------|
| Login Response          | Session             | 0x07         | No        |
| Logout                  | Session             | 0x08         | No        |
| Server Heartbeat        | Session             | 0x09         | No        |
| Replay Complete         | Session             | 0x13         | No        |
| Order Acknowledgement   | Application         | 0x0A         | Yes       |
| Order Rejected          | Application         | 0x0B         | No        |
| Order Modified          | Application         | 0x0C         | Yes       |
| Order Restated          | Application         | 0x0D         | Yes       |
| User Modify Rejected    | Application         | 0x0E         | No        |
| Order Cancelled         | Application         | 0x0F         | Yes       |
| Cancel Rejected         | Application         | 0x10         | No        |
| Order Execution         | Application         | 0x11         | Yes       |
| Trade Cancel or Correct | Application         | 0x12         | Yes       |

## 11 Port Attributes

The table below lists BOE port attributes that are configurable on the port or firm level. Changes to these attributes can be made by [entering](#) a Logical Port Change Request via the [BATS Member Web Portal](#).

| Attribute                                        | Default   | Description                                                                                                                                                                                        |
|--------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Allowed Clearing MPID(s)*                        | All MPIDs | Clearing MPID(s) allowed for trading on port.                                                                                                                                                      |
| Default Clearing MPID                            | None      | Default MPID to use if none is sent on New Order.                                                                                                                                                  |
| Allow Pre-market*                                | Yes       | Allows for orders to be entered prior to regular market open.                                                                                                                                      |
| Allow Post-market*                               | Yes       | Allows for orders to be entered after the regular market close.                                                                                                                                    |
| Allow Short Sales*                               | Yes       | Allows or disallows short sales.                                                                                                                                                                   |
| Allow ISO*                                       | Yes       | Allows or disallows ISO orders.                                                                                                                                                                    |
| Allow Directed ISO*                              | Yes       | Allows or disallows ISO orders directed to other market centers.                                                                                                                                   |
| Default Routing Instruction†                     | “RND”     | Specifies a default value for <i>RoutingInst</i> .                                                                                                                                                 |
| Default Exec. Instruction†                       | None      | Specifies a default value for <i>ExecInst</i> .                                                                                                                                                    |
| Maximum Order Size*                              | 25,000    | Maximum number of shares allowed per order.                                                                                                                                                        |
| Maximum Order Dollar Value*                      | Unlimited | Maximum order dollar value per order.                                                                                                                                                              |
| Default Price Sliding†                           | “S”       | Default price sliding behavior. Specifies a default value for <i>DisplayIndicator</i> .                                                                                                            |
| Default Pricing Sliding (Hidden Order Override)† | “S”       | When a different default price sliding behavior is desired for hidden orders, this port attribute may be used. Specifies a default value for <i>DisplayIndicator</i> , but only for hidden orders. |

|                                                |                  |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gross Daily Risk Market Order Notional Cutoff* | None             | Optional parameter that if specified will result in rejects for <b>market</b> orders when <b>gross</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.                                                                                                                                                                                                                                   |
| Gross Daily Risk Market Order Notional Warn %  | None             | Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.                                                                                                                                                                                                                                                                                           |
| Net Daily Risk Limit Order Notional Cutoff*    | None             | Optional parameter that if specified will result in rejects for <b>limit</b> orders when <b>net</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.                                                                                                                                                                                                                                      |
| Net Daily Risk Limit Order Notional Warn %     | None             | Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.                                                                                                                                                                                                                                                                                           |
| Net Daily Risk Market Order Notional Cutoff*   | None             | Optional parameter that if specified will result in rejects for <b>market</b> orders when <b>net</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.                                                                                                                                                                                                                                     |
| Net Daily Risk Market Order Notional Warn %    | None             | Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.                                                                                                                                                                                                                                                                                           |
| Default Attributed Quote*†                     | Never            | Specifies a default value for <i>AttributedQuote</i> . May only override at order to level after executing Attribution Addendum to Exchange User Agreement. Once Addendum has been executed, may default to Yes or No through Bats Trade Desk.                                                                                                                                                                                    |
| Crossed Market Reject/Cancel                   | No               | Reject new orders upon receipt when the NBBO in the subject security is crossed. Routable orders will have any remaining quantity cancelled back if the NBBO is crossed when the order returns to the Bats Book. Order modifications which cause a loss of priority (e.g. due to a price change or increase in size) will result in a cancel of the original order if the NBBO is crossed upon receipt of the modify instruction. |
| Send Peg Restatements                          | <i>Option #1</i> | Send order restatements for Peg order moves.<br><ol style="list-style-type: none"> <li>1. No Peg restatements (default)</li> <li>2. Market Maker Peg orders only</li> <li>3. All Peg orders except Market Maker Peg orders</li> <li>4. All Peg orders</li> </ol>                                                                                                                                                                  |
| Single Order ADV Check*                        | None             | Reject orders when order size exceeds a specified percentage of the 20-day ADV. Members may also                                                                                                                                                                                                                                                                                                                                  |

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

|                                                            |                  |                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                            |                  | specify a 20-day ADV amount below which the check will not be applied.                                                                                                                                                                                                                                               |
| Duplicative Order Protection Time Threshold                | None             | Time window, in seconds, for Duplicative Order Protection check.                                                                                                                                                                                                                                                     |
| Duplicative Order Protection Order Count Threshold         | None             | Number of orders with the same <i>ClearingFirm</i> , <i>Price</i> , <i>OrdQty</i> , and <i>Symbol</i> that must be seen within the Duplicative Order Time Threshold to initiate Duplicative Order Protection Action.                                                                                                 |
| Duplicative Order Protection Action                        | <i>Option #1</i> | Action taken when Duplicative Order Protection criteria is met.<br><ol style="list-style-type: none"> <li>1. Not enabled</li> <li>2. <u>Reject</u> new orders for remainder of Duplicative Order Time Threshold<br/> <u>Disable port</u> for <i>ClearingFirm</i>. Must call Bats Trade Desk to re-enable.</li> </ol> |
| All Routable To Halt Auction (BZX Only)                    | No               | Send all routable orders to the halt auction on the primary listing exchange. This applies to all routing strategies.                                                                                                                                                                                                |
| Early Trading Session Opt-Out ( <i>Effective 5/25/16</i> ) | No               | Allows for orders to be executable during the Early Trading Session (7:00 AM to 8:00 AM). If set to Yes, then the following TimeInForce (FIX Tag 59) values will be translated.<br><ul style="list-style-type: none"> <li>• 0 (DAY) -&gt; E (PRE)</li> <li>• 5 (GTX) -&gt; X (PTX)</li> </ul> 6 (GTD) -> T (PTD)     |

| 1.1.8 | 09/21/11 | Added cancel and reject reason of “m” Market Access Risk Limit.<br>Updated <i>ExecID</i> description to show that <i>ExecID</i> can be compared to ODROP, FIXDROP and DROP ExecIDs.<br>Corrected description of Market Peg order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1.2.0 | 10/21/11 | Ammended Section 6 Drop Copies to reflect BOE support via Order by Order FIX DROP.<br>Removed Europe-specific <i>RestatementReason</i> values.<br>Updated bitfields on Login Request and Login Response messages for Order Cancelled and Order Restated messages.<br>Updated Order Modify message to reflect that <i>ExecInst</i> cannot be changed with an Order Modify.<br>Added <i>CancelReason</i> of “H” = Halted.<br>Removed Default Auction Only to Late port attribute.<br>Added <i>ExecInst</i> “r” = Late.<br>Added “M” = MaxSize Exceeded to <i>ModifyRejectReason</i> values.<br>Converted reserved 8 <sup>th</sup> byte of all bitfield sets to a byte reserved for Bats internal use. |
| 1.2.1 | 10/25/11 | Enforce <i>Capacity</i> marking on New Order messages (effective date 11/11/11).<br>Added <i>OrderRejectReason</i> of “C = Capacity Undefined” to Order Rejected message.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1.2.2 | 11/02/11 | Added <i>ModifyRejectReason</i> of “m = Market Access Risk Limit Exceeded” to Order Rejected message.<br>Corrected description of Reason Code “L” for Order Canceled, Order Rejected, and Modify Rejected messages.<br>Undefined <i>NewOrderBitfields</i> , <i>ModifyOrderBitfields</i> , or <i>CancelOrderBitfields</i> within incoming messages (New Order, Modify Order, Cancel Order) will be rejected.                                                                                                                                                                                                                                                                                         |
| 1.2.3 | 11/07/11 | Added Notional Cutoff Aggregation Method, Limit Order Notional Cutoff, and Market Order Notional Cutoff to <b>Port Attributes</b> section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1.2.4 | 12/08/11 | Added Send Routing Instruction to <b>Port Attributes</b> section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1.2.5 | 12/16/11 | Added “o” = Max Open Orders Count Exceeded to <i>OrderRejectReason</i> values.<br>Noted <i>Capacity</i> is required for New Order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1.2.6 | 01/05/12 | Added <i>CancelReason</i> of S = Short Sale Price Violation to Order Cancelled message.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

|       |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       |          | Added DisplayIndicator of “M” in support of Multiple Display-Price Sliding.                                                                                                                                                                                                                                                                                                                                                                                                |
| 1.2.7 | 01/18/12 | Updated Multiple Display-Price Sliding effective date pending SEC Approval.                                                                                                                                                                                                                                                                                                                                                                                                |
| 1.2.8 | 01/30/12 | Added TRIM2 (P), TRIM2- (p), TRIM3 (Q), TRIM3- (q) as Routing Strategies in 3rd character of RoutingInst.                                                                                                                                                                                                                                                                                                                                                                  |
| 1.3.0 | 02/01/12 | Added option to allow for cancel of all open orders including auction only orders to Cancel On Disconnect in the Port Attributes section.<br>Added support for using either Net, Gross, or a combination of both Notional Cutoff Aggregation Methods to the Port Attributes section. Effective 02/03/12.<br>Removed Notional Cutoff Aggregation Method attribute and added specific attributes for both Gross and Net Daily Risk Limit/Market Cutoffs. Effective 02/03/12. |
| 1.3.1 | 02/17/12 | Clarified ExecInst defaults for Routeable Orders.<br>Minor updates to Port Attributes section.                                                                                                                                                                                                                                                                                                                                                                             |
| 1.4.0 | 03/07/12 | Added AttributedQuote. Effective 05/07/12.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1.4.1 | 03/08/12 | Correction to AttributedQuote within the Login Request and Login Response. In the Order Acknowledgement Bitfields, Bitfield6, AttributedQuote has been moved from bit 1 to bit 4.                                                                                                                                                                                                                                                                                          |
| 1.4.2 | 04/04/12 | Remove support for RHO orders in Non-Bats Listed Securities.                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1.4.3 | 04/25/12 | Specified Value 32 of Return Bitfield 4 is Reserved.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1.4.4 | 05/17/12 | Updated PreventMemberMatch tag 7928 to assign formerly reserved 3rd character to Trading Group Id. Effective 05/25/12.<br>Changed NYSE AMEX references to NYSE MKT.                                                                                                                                                                                                                                                                                                        |
| 1.5.0 | 05/25/12 | Post Only Orders will execute against resting orders if the value of price improvement associated with the execution equals or exceeds the sum of fees charged for the execution plus the value of the rebate that would have been provided if the order posted to the Bats book and subsequently provided liquidity. Effective 06/08/12                                                                                                                                   |
| 1.5.1 | 06/14/12 | Clarified the cases in which SecondaryOrderID is sent.<br>Removed Port Attributes that are not applicable to BOE.                                                                                                                                                                                                                                                                                                                                                          |
| 1.5.2 | 06/19/12 | Added reason code of ‘x = Crossed Market’ to OrderRejectReason, ModifyRejectReason and CancelReason.<br>Added Crossed Market Reject/Cancel to Port Attributes section.                                                                                                                                                                                                                                                                                                     |

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

|       |          |                                                                                                                                                                                                                            |
|-------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.5.3 | 08/07/12 | Removed Reference to TRAC and DATA as those ECNs have ceased operations.<br>Added new RestatementReason of Q – Liquidity Updated, effective 08/17/12.<br>Updated Multiple Display-Price Sliding effective date to 08/24/12 |
| 1.5.4 | 09/13/12 | Clarification added to Order Restated message example.                                                                                                                                                                     |
| 1.5.5 | 09/26/12 | <i>AttributedQuote</i> field was missing on the Bats to Member Order Acknowledgement messages.                                                                                                                             |
| 1.5.6 | 01/31/13 | Added ‘u = Order would cross LULD Price Bands’ to <i>CancelReason</i> and <i>OrderRejectReason</i> fields.                                                                                                                 |
| 1.5.7 | 02/08/13 | Clarified <i>DiscretionAmount</i> based on ability to use <i>DiscretionAmount</i> with directed orders.                                                                                                                    |
| 1.6.0 | 02/11/13 | Added Market Maker Peg order type <i>ExecInst</i> (FIX Tag 18) = Q, <i>OrdType</i> (FIX Tag 40) = P, <i>RoutingInst</i> (FIX Tag 9303) = P. Effective 03/15/13.                                                            |
| 1.7.0 | 04/04/13 | Added new <i>RestatementReason</i> = P and added Peg Restatements to <b>Port Attributes</b> section. Effective 05/17/13.<br>Updated <i>AccessFee</i> definition.                                                           |
| 1.7.1 | 04/05/13 | Defined <i>SubLiquidityIndicator</i> Bitfield.                                                                                                                                                                             |
| 1.7.2 | 05/24/13 | Removed <i>SubLiquidityIndicator</i> from Order Modified and Order Restated Messages. <i>SubLiquidityIndicator</i> was added to these message types in error.                                                              |
| 1.7.3 | 05/30/13 | Corrected effective date of <i>SubLiquidityIndicator</i> on Order Acknowledged message to 05/24/13.                                                                                                                        |
| 1.8.0 | 07/10/13 | CYCLE routing strategy, where 3 <sup>rd</sup> character of <i>RoutingInst</i> = “C” to be deprecated in favor of Parallel routing strategies. Effective 09/03/13.                                                          |
| 1.8.1 | 08/05/13 | Market Maker Pegs orders sent with a <i>TimeInForce</i> = 5 or 6 (GTX or GTD) will be rejected.                                                                                                                            |
| 1.8.2 | 09/27/13 | Added ‘J’ value to <i>SubLiquidityIndicator</i> (execution from order that joined the NBBO).<br>Added ‘Y = Symbol Not Supported/NBBO Unknown’ <i>CancelReason</i> .                                                        |
| 1.8.3 | 12/10/13 | Updated CYCLE routing strategy where 3 <sup>rd</sup> character of <i>RoutingInst</i> (Tag 9303) = “C” will be rejected effective 01/02/14.                                                                                 |
| 1.8.4 | 06/05/14 | Added maximum of 20% for Fat Finger Percentage in <b>Port Attributes</b> section.<br>CYCLE routing strategy removed.<br>Removed references to NSX and CBSX.<br>Added OATS EPID section.                                    |

Bats BZX Exchange US Equities  
BOE Specification (Version 1.9.5)

|        |          |                                                                                                                                                                                                                                                                                                                      |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
